POST-EXTRACTION AND SURGERY INSTRUCTIONS

• Bite firmly on the gauze for at least 30 minutes.
• Minimize talking for 3-4 hours after surgery.
• Avoid physically strenuous activities for 24 hours.
• Stop any alcohol intake or smoking for a minimum of 3 days.
• Avoid sucking on a straw when drinking.
• If bleeding is more than a slight ooze, reapply a gauze pack directly over the area of extraction. If bleeding persists until the following day, please inform your dentist.
• Swelling may occur, but will eventually resolve after a few days.
  - Apply ice packs on the area for the first 3 days to control swelling.
  - After the 3rd day, apply warm compress to facilitate healing.
• Observance of cool, soft and liquid diet for the first 12 -24 hours after extraction or surgery. Avoid hot foods/drinks for 2-3 days & modify food or liquid intake as tolerated.
• Maintain proper oral hygiene: avoid brushing, chewing and touching the wound area so as not to disturb its healing.
• Gentle rinsing of warm water with salt may be done on the following days after extraction.
• After one week, have a follow-up visit with your dentist to check the condition of the site of extraction.
• For any concern, question or problem after surgery, contact you dentist.
• Take medicine as prescribed and instructed by dentist.
